

Collaborating to improve the accuracy and application of NVS* by fishers

We are conducting industry meetings, individual interviews, and observations with both the science and fishing community. Analyzed results will assist in the collaborative design of future iterations of this tool. <http://nvs.nanoos.org/TunaFish>

Fishing off the Oregon coast is a risky and uncertain business. Increased understanding of the fishing industry's needs related to operational efficacy and decision making can ultimately increase their use of the NVS site and, therefore, their safety and profitability.

*NVS is the NANOOS Visualization System – Making field data and model fields accessible to users in the Pacific Northwest.
