

# Automated Validation of West Coast Ocean Color Products

Developed an automated system for validation of VIIRS products by comparison with MODIS, MERIS and in situ data.

Comparisons of VIIRS and MODIS Chlorophyll Products for Early March at the Aeronet Site off the Los Angeles Coast.

The use of VIIRS data for Navy, NOAA and Climate Change records requires cross calibration with MODIS, MERIS and in situ data for a range of open ocean and coastal ocean environments.
